2316 225

Class–BA/B.Sc II (Sem. IV)

Subject –Mathematics

Paper-II Number Theory

Time Allowed : 3 Hrs **Maximum Marks :50**

Note :- Attempt any five questions selecting atleast Two from Each Section.

Section - A

1. (a) For any two integers a and b, with a > 0, there exists unique integers q and r such that b = aq + r, $0 \le r < |a|$.

   (b) If m is an integer not divisible by 2 or 3 show that $24/m^2 + 23$. (6,4)

2. (a) Prove that $a^{2^n} + 1$ divides $a^{2^m} - 1$ if m > 0; & n > 0;

   also prove that $(a^{2^m} + 1, a^{2^n} + 1) = \begin{cases} 1 & \text{if a is even} \\ 2 & \text{if a is odd} \end{cases}$ for positive integers a, m,n.

   (b) Find L.C.M [714, 2030, 2205] (5,5)

3. (a) State and prove fundamental theorem of Arithmetic.

   (b) If p, q are primes such that p – q = 2, show that $p^p + q^q$ is divisible by p + q i.e. $p^p + q^q$ is composite number. (5,5)

4. (a) If p_n is the nth prime, prove $p_n \le 2^{2^{n-1}}$.

   (b) Show that $53^{103} + 103^{53}$ is divisible by 39. (5,5)

Section - B

5. (a) Solve 91 x ≡ 1053 (mod 221)

   (b) Show that $1^5+2^5 + 3^5+.....+ 100^5$ is divisible by 4.

6. (a) Solve x ≡ 5 (mod 11), x ≡ 14 (mod 29) & x ≡ (mod 31) by using Chinese Reminder Theore

   (b) Show that $\frac{n^5}{5} + \frac{n^3}{3} + \frac{7n}{15}$ is always an inte

   $\forall n \in N$ (6

7. (a) State and prove Wilson's Theorem.

   (b) For any odd prime p, show that $2^2 . 4^2 . 6^2 .....(p-1)^2 = (-1)^{\frac{p+1}{2}}$ (mod p) usi Wilson's Theorem. (5

8. (a) State and prove Euler's Theorem.

   (b) Show that $a^{560} \equiv 1 \pmod{561}$ if gcd (a, 561) = however 561 is not a prime. (6
